Executive Data Insights Report

May 2022 – June 2025

Prepared for the Office of the CEO
June 2025

\$123M	31,465	19,820	504
Total Revenue	Total Orders	Customers	Products

6 countries · 10 data tables · Daily Airflow pipeline

Executive Summary

The business tripled revenue between 2022 and 2024 — a genuinely impressive result. But beneath that growth, four structural risks are quietly building. Left unaddressed, any one of them could become expensive.

This report documents seven data findings and translates them into five specific actions. The findings are not speculative — they are directly observable in the transaction data.

Finding	The Risk	Urgency
Revenue slowdown	2025 tracking below prior year pace	HIGH
Category concentration	87% of revenue from Bikes alone	HIGH
Customer retention	61% of customers never returned	HIGH
Top account exposure	Top 10 customers = ~\$9M with no dedicated mgmt	HIGH
Dead product catalogue	47% of products have zero sales, ever	MEDIUM
Channel value gap	In-store AOV is 20x online — often undervalued	MEDIUM
Geographic concentration	57% revenue from US; EU untapped	LOW

Data Findings

Finding 1 — Revenue Tripled, Then Slowed

Orders grew from 1,692 in 2022 to 14,244 in 2024 — a 740% increase in two years. Revenue followed: from \$16.3M to \$49.0M. But 2025 is tracking noticeably below the prior year's pace at the same calendar point.

Year	Orders	Revenue	Growth
2022	1,692	\$16.3M	Partial year
2023	3,830	\$35.5M	+118%
2024	14,244	\$49.0M	+38%
2025	11,699	\$22.4M	Partial — Jun YTD

⚠ Watch closely:
Is 2025 data still arriving, or has growth genuinely stalled? Finding the answer early is far cheaper than finding it in Q4.

Finding 2 — One Category Is Carrying the Entire Business

Bikes generate 87% of total revenue — \$94.7M of the \$123M total. Accessories had more orders than any other category (19,524) but produced only \$1.3M in revenue.

Category	Orders	Revenue	Revenue Share
Bikes	18,368	\$94.7M	87%
Components	2,650	\$11.8M	11%
Clothing	9,877	\$2.1M	2%
Accessories	19,524	\$1.3M	1%

⚠ Strategic risk:
Any supply chain disruption, pricing pressure, or new competitor in Bikes threatens 87 cents of every dollar earned. This concentration deserves a formal contingency plan.

Finding 3 — 61% of Customers Never Came Back

More than six in ten customers bought once and disappeared. The business is effective at acquisition and ineffective at retention.

Orders Placed	Customers	Share
1 — never returned	11,649	61.3%
2 orders	5,473	28.8%
3 orders	1,204	6.3%
4+ orders	704	3.7%

💡 Opportunity:

A re-engagement campaign for the 11,649 one-time buyers costs a fraction of new acquisition. Converting even 10% into second-time buyers moves the revenue needle meaningfully — without spending a euro on ads.

Finding 4 — In-Store Customers Are Worth 20× Online

Online drives 88% of order volume but only 26% of revenue. In-store generates the inverse. The average in-store transaction is worth more than 20 online transactions combined.

Channel	Orders	Revenue	Avg. Order Value
Online	27,659 (88%)	\$32.4M (26%)	\$1,173
In-Store	3,806 (12%)	\$90.8M (74%)	\$23,851

💡 Do not defund physical retail:

Volume numbers for online can mislead. The \$23,851 average in-store transaction is where the business actually makes its money. High-value relationships happen face to face.

Finding 5 — The Top 10 Customers Are Worth ~\$9 Million

These ten individuals have each spent between \$820,000 and \$989,000 with the business. Each placed 8–12 orders. They are not customers — they are partners.

#	Customer	Orders	Lifetime Value
1	Roger Harui	12	\$989,184
2	Andrew Dixon	12	\$961,676
3	Reuben D'sa	12	\$954,022
4	Robert Vessa	12	\$919,802
5	Ryan Calafato	12	\$901,347
6	Joseph Castellucio	12	\$887,090
7	Kirk DeGrasse	8	\$841,867
8	Lindsey Camacho	12	\$834,476
9	Robin McGuigan	12	\$824,332
10	Stacey Cereghino	12	\$820,384

⚠ Account risk:

Losing one of these accounts is a \$900,000 problem. If there is no dedicated person managing these relationships proactively, that is a gap that needs to be closed this week — not this quarter.

Finding 6 — 47% of Products Have Never Sold a Single Unit

238 out of 504 products have zero orders, ever. These products occupy warehouse space, appear in the system, require maintenance, and contribute nothing to revenue.

Status	Count	Share of Catalogue
Active (sold ≥1 unit)	266	53%
Inactive (zero sales, ever)	238	47%

 Quick win:

A one-time product audit is not a big project. Discontinue anything with zero sales and no strategic justification. The freed capital and reduced operational overhead are an immediate, cost-free win.

Finding 7 — The US Does the Heavy Lifting

57% of total revenue comes from one country. That is not a problem today — but it is a concentration risk worth managing over time. Germany is the most interesting outlier: similar order volume to France, but \$2.6M less in revenue.

Country	Orders	Revenue	Share
us United States	12,041	\$70.8M	57%
ca Canada	4,067	\$18.4M	15%
au Australia	6,843	\$11.8M	10%
gb United Kingdom	3,219	\$8.6M	7%
fr France	2,672	\$8.1M	7%
de Germany	2,623	\$5.5M	4%

 Reduce US dependency:

UK, France, and Germany are generating real order volumes with room to grow. A targeted push in these markets reduces US dependency and opens meaningful new revenue from customers the business already has.

Recommended Actions

These five actions directly address the findings above. They are ordered by urgency.

#	Action	Why	Expected Impact
1	Investigate the 2025 slowdown this week	Growth reversals have causes — find it early	Prevent a Q4 crisis
2	Re-engage the 11,649 one-time buyers	Cheapest path to revenue that already exists	~\$5M+ at current AOV if 10% convert

3	Assign account managers to top 100 customers	A \$900K account cannot be managed by email sequences	Protect ~\$30M+ in top-tier revenue
4	Discontinue the 238 zero-sale products	Half the catalogue is costing money and generating nothing	Reduced overhead, freed capital
5	Invest in UK, France, and Germany	Real orders already arriving — activation needed	Reduce US dependency; new revenue

Bottom line:

The growth story here is real and impressive. The risks identified in this report are not hypothetical — they are visible in the data today. Acting on them now, while the business is healthy, is far less costly than acting on them when they become crises.
